

docker

Prague Meetup
25.01.17

**Welcome to the first Docker Prague
Meetup in 2017!**

Agenda:

1. New Docker Prague Meetup co-organizer
2. What's new in Docker
3. Our plans
4. “Test-driven Infrastructure with Puppet, Docker, Test Kitchen and Serverspec”
- *Yury Tsarev, GoodData*
- 4.5. Short break
5. “Portus: how to manage and secure an on-premise Docker registry”
- *Evgeny Shmarnev, SUSE*
6. Beer!

Thank you guys:

Former co-organizers of Prague Docker Meetups:

- David Becvarik
- Jakub Veverka
- And to all who helped to organize meetups...

New co-organizer

Evgeny Shmarnev

- Works at SUSE as OpenStack Automation Engineer
- Interested in Docker since very beginning of the project
- Worked directly with Docker and Docker-related projects (Portus, zypper-docker, etc) here at SUSE

Contacts:

- shmarnev@gmail.com
- <https://github.com/evalle>
- [@eshmarnev](https://twitter.com/eshmarnev) on Twitter

What's new in Docker

- Version 1.13.0 - still no due date:
 - 11/10/2016 (code freeze)
 - IMPORTANT: In Docker 1.13, the managed plugin api changed, as compared to the experimental version introduced in Docker 1.12. You must uninstall plugins which you installed with Docker 1.12 before upgrading to Docker 1.13. You can uninstall plugins using the ***docker plugin rm*** command.

Error starting daemon: json: cannot unmarshal string into Go value of type
types.PluginEnv

To manually remove all plugins and resolve this problem, take the following steps:

1. Remove `plugins.json` from: `/var/lib/docker/plugins/`.
2. Restart Docker. Verify that the Docker daemon starts with no errors.
3. Reinstall your plugins.

Our plans:

- March 2017:
4th Docker B-day in the GoodData office!
- More Docker Meetups (one meetup every two month)

We have some swag for you!
